

THE DIVERSITY OF PLEXITRAC

The Plexitrac System allows for the specification of the type of track that will meet the demands of the decision makers, athletes and budget. Plexitrac offers four distinct all weather track systems. Each level provides unique characteristics and attributes.

Plexitrac[®] XP

Plexitrac XP is the newest innovation in Plexitrac System Technology. Using an enhanced performance binder, Plexitrac XP has successfully achieved IAAF certification. Plexitrac XP track surfaces have superior strength and elongation properties. Plexitrac XP can be installed in thicknesses from 13-18mm depending upon your certification requirements.

Plexitrac[®] ACCELERATOR

Plexitrac Accelerator offers a high level of performance for texture, longevity and athletic capability. Plexitrac Accelerator is a colorful, highly textured, EPDM surface which provides optimum traction and color intensity. It is top coated with the Polyresin Plexitrac Coating that ensures uniformity and years of ultraviolet light stable color.

Plexitrac[®] Flash

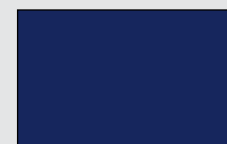

Plexitrac Flash is the affordable, traditional red track surfacing system. Plexitrac Flash consists of a base layer of black SBR rubber bound together by red Plexitrac Binder for color depth. This substrate is then layered with a single application of colored EPDM followed by multiple spray applications of Plexitrac Coating for color intensity.

Plexitrac[®] Lightning

Plexitrac Lightning is comprised of select black SBR rubber granules bound together with a black pigmented Plexitrac Binder. Plexitrac Lightning is then top coated with a highly pigmented black polyresin finish coat of Plexitrac Coating for additional long term strength and ultraviolet light stability.

SURFACE OPTIONS AND MAINTENANCE

Plexitrac offers a variety of options regarding color, texture, shock absorbency and budget. Plexitrac is the first track manufacturer to offer the option of custom colors for running tracks in addition to the traditional red and black at affordable prices. Plexitrac Products are the most cost effective and safe option for the repair and upgrade of existing latex and polyurethane tracks.

SERVICE AND SUPPORT

Plexitrac partners with the finest network of trained field representatives and Authorized Applicators available in the sports surfacing marketplace. These local installers are knowledgeable in application techniques and problem solving and are backed by an organization long recognized as the world leader in acrylic sport surfacing systems.

Detailed specifications provide owners with the ability to evaluate the intent and performance of all parties. Authorized Applicators are fully aware of the quantities and techniques required to accomplish a successful installation exceeding athletic standards.

OUTSTANDING REPUTATION

Plexitrac is manufactured by California Products Corporation, the premier source and recognized leader of waterborne sports surfaces worldwide. California Products has been a pioneer in research and technology of acrylic sport surfacing systems since 1953. California Products is committed to developing the highest quality waterborne tracks available. Our research and development team of professionals continuously strive to design tracks that are innovative, adaptable and environmentally responsible.

The 'USGBC Member Logo' is a trademark owned by the U.S. Green Building Council and is used by permission.

PLEXITRAC® RUNNING TRACK SURFACES

Advanced superior track surface systems for full performance athletic facilities

POLYRESIN TECHNOLOGY IN PLEXITRAC

Plexitrac Systems are advanced track surfacing systems designed to provide runners with the highest levels of surface performance for competition and force reduction for safe training. Polyresin binders present in Plexitrac strike the perfect balance between performance and safety. Running performance is enhanced with improved dynamic response. Athletic safety is secured with appropriate cushioning. This minimizes musculoskeletal stress and fatigue, reducing the probability of injuries and accidents.

Plexitrac researchers, in conjunction with leading scientists from the Massachusetts Institute of Technology (MIT), have found that installation of a full thickness, shock-absorbing surface is crucial in achieving proper safety for the athlete.

Plexitrac Systems are also the smart choice for re-texturing, rejuvenating and enhancing urethane, SBR latex and colandered rubber tracks.

EXCEPTIONAL VALUE

Plexitrac is an exceptional value because highly trained local Authorized Applicators are available to insure strict adherence to specifications. This network of Authorized Applicators is supported by company managers and laboratory personnel. Together, they are capable of addressing the needs of individual facilities and provide specifications to ensure long-term durability and athletic performance. For over 20 years the value of Plexitrac has been enhanced by the collaboration of an exceptional manufacturing operation and the best of independent athletic surface contractors. Independent design professionals specify Plexitrac because they know that the combination of over 50 years of experience in manufacturing Sport Surfaces and installation by the most reliable installers available is a powerful team.

Value is derived not only from a competitive installation price but the assurance that supplier and applicator will be there to service your investment in the future. Properly installed and maintained Plexitrac will exceed the life expectancy of asphalt pavement.

Why Plexitrac®?

- Long-term performance
- Unique formulations
- Abrasion resistance
- Maintains biochemical characteristics
- Low maintenance cost

reliability

performance

- ASBA awards winner
- Water based Polyresin binders and coatings
- Low VOC
- LEED® compliant
- IAAF certifiable
- 45-64% recycled materials

ENVIRONMENTAL AWARENESS

Plexitrac's Polyresin formulas are based on waterborne resin technology pioneered by California Products. These unique formulas do not require the use of toxic solvents on the jobsite. Plexitrac Systems are manufactured free from lead, mercury and other heavy metal hazards. Tests confirm no toxic products leach from the system.

Plexitrac products are free of the strong odors and potential allergic chemical reactions created by many track products. The synthetic resins will not cause allergic latex reactions. This eliminates potential problems at occupied facilities.

All Plexitrac Systems can facilitate valuable credits under the US Green Building Council (USGBC®) LEED rating systems. Note: Benefits can vary by region.

Plexitrac Systems utilize both recycled and post industrial components. This manufacturing choice reduces the exploitation of petroleum and wood resources.

PLEXITRAC: THE ULTIMATE PERFORMER

Plexitrac Systems are proven performers in all climate conditions. Our proprietary coating system protects Plexitrac against fade and degradation from the heat and sun even in harsh UV environments like the South Pacific, Dubai and Australia. The granular EPDM rubber meets the IAAF requirements for slip resistance, a common challenge in rainy climates like the Northwestern US and much of Florida. When installed at 13mm, Plexitrac will exceed IAAF requirements for force reduction and deformation. Plexitrac Systems resist the snow and winter cold that degrade lesser running tracks.

Plexitrac Systems allow athletes to perform safely in a full range of temperatures. From 40° - 120°F (4 - 49°C), the performance properties of the track remain favorable for training and competing.

The combination of detailed specifications, authorized applicators and factory personnel allow the Plexitrac System to be warranted for long term performance.
